Art Unit: 1649

1) Claims 1 to 48 are pending in the instant application.

2) Claims 22 and 48 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim can not depend, directly or indirectly, from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, these claims not been further treated on the merits.

3) Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1 to 16, 18, 19, 23 to 41, 44 and 45, only in so far as they are drawn to a method of treating by administering a polypeptide.

Group II, claims 1 to 17 and 23 to 43, only in so far as they are drawn to a method of treating by administering a activity modulating compound of unspecified constitution.

Group III, claims 1 to 16, 20, 21, 23 to 41, 46 and 47, only in so far as they are drawn to a method of treating by administering a polynucleotide encoding a polypeptide.

Group IV, claims 1 to 16 and 23 to 41, only in so far as they are drawn to a method of treating by administering an antisense polynucleotide.

The inventions listed as Groups I to IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Art Unit: 1649

The polypeptide of invention I, the modulatory compound of invention II, the polynucleotide of invention III and the antisense molecule of invention IV lack unity of invention because they lack a common utility that is based upon a common structural feature or combination of features that distinguishes them as a group from the prior art. The first page of the instant specification concedes the recited polypeptide and polynucleotide to the prior art. Therefore, the relationship between the recited polypeptide and a polynucleotide encoding that polypeptide can not be relied upon as a distinguishing special technical feature.

Claims 1 to 21 and 23 to 47 are generic to a plurality of disclosed patentably distinct species of disorders. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 1649

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
